Move your domain from GoDaddy to Cloudflare

Printable checklist

- [ ] Zone file exported and every records page screenshotted
- [ ] Email records written down: MX, SPF, DKIM, autodiscover, DMARC
- [ ] DNSSEC checked under DS Records, and off at least 24 hours before the nameserver change if it was on
- [ ] Domain added to Cloudflare on the Free plan
- [ ] Cloudflare's records match the GoDaddy list
- [ ] Every email record set to DNS only (gray cloud)
- [ ] Two Cloudflare nameservers copied
- [ ] Nameservers changed at GoDaddy and the time noted
- [ ] Cloudflare shows the domain as Active
- [ ] Site opens with the padlock, with and without www
- [ ] Email works both ways, SPF and DKIM pass
- [ ] Optional: domain unlocked, code pasted at Cloudflare, transfer approved
- [ ] Optional: domain in Cloudflare Registrations with auto-renew on
